Tipping load calculation according to ISO 14397

FSD = overhead guard

Vibrations (weighted average effective value)

**Hand-arm vibrations (HAV):** The hand-arm vibrations are no more than 2.5 m/s<sup>2</sup> **Whole body vibrations:** This machine is equipped with a driver's seat that meets the requirements of EN ISO 7096:2000.

When

the loader is in accordance with the intended purpose, the whole body

vibrations vary from below 0.5 m/s² up to a short-term

maximum value.

It is recommended to use the values

specified in the table when calculating the vibration values

according to ISO/TR 25398:2006. At the same time the actual use conditions have to be taken into

consideration.

Tele wheel loaders, like wheel loaders, are to be classified by operating weight.
