## ◆ Workability

- When passing through a narrow pathway or gate on the way to the job site, the machine width can be contracted (910mm). The machine width can be extended (1000mm) during operation to ensure stability. The crawler can be extended or contracted according to the situation.

## ◆ Safety

- Use the lock lever to lock the levers for front, swing and travel operation, thereby preventing improper operation.
- The machine utilizes a mechanism for starting the engine in neutral with the lock lever in the locked position.

## ◆ Serviceability

- Front hoses are stored in the arm to protect them from damage. Articulated hose is used to make it easy to replace if it is damaged.
- A fully openable engine cover has been utilized.

## ◆ Operability

- Use of the hydraulic pilot makes for smooth and light operation.
