## TRAXOS Attachable Spreaders

The attachable spreaders of the TRAXOS series were specially designed for de-icing smaller municipal areas. They can be attached to tractors quickly, are easy to use and have a 0,9 m<sup>3</sup> to 1,8 l m<sup>3</sup> tank.

### Area of Use

The TRAXOS spreaders are ideal for de-icing smaller municipal areas. They can be attached to tractors with a Category II / III 3-point power lift.

### In Action

The TRAXOS is powered by the tractor's hydraulic system. The spreading material slips easily to the bottom of the container onto the auger. The open screw conveyor is spiralled to the left and right and delivers the spreading material in the exact doses to the central distributor.

### Distribution and Dosage

The TRAXOS distributes the spreading material with the highest precision. Spreading ranges of between 2.0 m and 6.0 m can be infinitely adjusted. The attachable spreader can be regulated manually using the hydraulic valve or by the CX-panel in the driver's cab. The spread rate is also infinitely adjustable. It is possible to select thawing materials between 5 g/m<sup>2</sup> und 40 g/m<sup>2</sup>, as well as, abrasives of between 40 g/m<sup>2</sup> und 300 g/m<sup>2</sup>. The CX-steering makes the TRAXOS entirely path-independent and its closed loop system ensures exact dosage in all conditions.

### Flexible and Fast

The fact that the TRAXOS spreaders can be mounted quickly makes them ready for use fast. The self-loading facilities allow drivers to single-handedly load the spreading materials onto the spreader enabling them to start work immediately. The spreading material container is tipped hydraulically, pushed into the material like a front loader and then swings back.

### High Quality Materials

The spreading material container is made of high-quality steel making it anti-corrosive and the spreading plate is made of V2A stainless steel.

Technical Data	TRAXOS 09	TRAXOS 12	TRAXOS 15	TRAXOS 18
Container (m <sup>3</sup> )	0.9	1.2	1.5	1.8
Empty weight (kg)	550	600	660	700
Full weight (kg)	1 630	2 040	2 450	2 860
